

This is the final checklist. It includes the first sighting location and count for each species - this is how it exported from my database. The red ones are those I didn't see, and some I don't have the location for, which I have indicated. I have removed Willow Tit after a chat with Alan [Songar Tit is considered by some to be a subsp of Willow Tit and acc to the field guide Songar only just creeps in to the province and is not shown on the coast where we saw it]. However the ones we saw in the hotel grounds looked OK for Songar with their big bibs.
